

AMRUT GROWTH

Premium Humic Acid Based Growth Promoter

AMRUT GROWTH is a high-performance humic acid formulation designed to improve soil fertility, stimulate root growth, and enhance nutrient uptake. It supports healthier crop development, improves microbial activity in soil, and increases overall crop productivity.

Key Benefits:

- Promotes deeper and stronger root development.
- Enhances nutrient absorption and soil activity.
- Improves plant growth and chlorophyll formation.
- Increases crop quality and yield potential.
- Improves tolerance against drought and stress conditions.
- Suitable for all major crops and horticulture applications.

Application & Dosage

AMRUT GROWTH can be used through drip irrigation, soil application, and foliar spray for improving crop growth and soil health.

| Crop Type | Application Purpose | Recommended Dosage |
|---------------------|----------------------------|---------------------|
| Vegetables | Root & Vegetative Growth | 2 – 3 ml per liter |
| Fruit Crops | Yield & Plant Health | 3 – 4 ml per liter |
| Field Crops | Soil Fertility Improvement | 2 – 3 ml per liter |
| General Application | Preventive Soil Nutrition | 250 – 500 ml / acre |

Precautions

- Shake well before use.
- Store in a cool and dry place.
- Keep away from children and direct sunlight.
- Use recommended dosage only.
- For agricultural use only.
